

## FINESSE GVH

### Granulated Vermi-Humus

**Finesse GVH** is a homogeneously blended, pelleted compost product comprised of high quality earthworm castings, TeraVita's L-85 raw leonardite & TeraVita's soluble humate. Finesse GVH added to the top of the soil will feed the underground system naturally.

**Usage:** Finesse GVH provides all the benefits of compost topdressing but in a stable, concentrated form with the efficiency and ease of application of a granular product. For use on turf, landscape beds, and gardens.

#### Benefits:

- LABOR SAVINGS . . . LABOR SAVINGS !!!
- Eliminates the issues associated with inconsistent compost (i.e, weed seeds and unfinished product)
- GREAT way to add organic matter, carbon & biology
- Pelleted for application using a standard spreader
- Great for transitioning synthetic lawns
- Passes Organic Certifications
- Helps to improve soil structure & CEC
- Highly nutritious, complex carbon source that is more stable than traditional compost
- Excellent food substrate for indigenous biology
- Protozoa, bacteria and fungi content
- Tera Vita's L-85 Raw Leonardite: consists of 3 soft leonardites with a min. 85% of humic acids, provides very stable humus (not an oxidizing compost), is a slow release complex carbon food source for the microbes in the castings and the soil. Soft leonardite breaks apart quicker than other leonardites and is more bio-assimilable.
- TeraVita's Soluble humate: is a natural chelating agent, provides minerals, trace elements, stimulates root development and is a food substrate for the biology in the castings and ultimately in the soil. It provides all the benefits of the leonardite but is available quicker because of its solubility

#### GVH Benefits Continued:

- Vermicompost is homogeneously blended with leonardite and partially encapsulated by the leonardite which makes the vermicompost more protected/stable, which in turn helps retain moisture.

**Application Rates:** Can be applied 3 times a season at rate of 10-25 pounds per 1,000 square feet.

**Packaging:** 50lb bag / 40 bags per pallet or 2000lb bulk sacks. *Finesse GVH is shipped in woven vinyl bags for the breathability of the biology. Product will last at least a year but over time the granulated form may disintegrate because of the high level of biological activity.*

## FINESSE

### Earthworm Castings

**Finesse Castings** are a high quality, highly biological 1/8<sup>th</sup> inch screened earthworm castings.

**Usage:** Athletic fields, mix with sand for top dressing or as Golf Course divot mix (30lb castings to 100lb sand). For use when topdressing turf with a loam/compost mix or to add biological benefits when aerating.

For use in landscape beds, gardens and potting mixes, incorporate with soil when planting or use as 1/2" top dressing in annual color beds before mulching.

#### Benefits:

- Slow release feed
- Biological benefits
- Micro nutrients & trace elements

**Packaging:** 40lb bags / 50 bags per pallet or 2,000lb bulk sacks.
